

Appendix 2 : Diffusion tube precision factors

The tables below show the precision factors that have been applied to the 2003 and 2004 bias corrected diffusion tube results to obtain the upper 95% confidence limits.

	<u>n</u>	<u>Precision (+/- %)</u>
2003	12	19.9
	11	20.9
	10	22.0
	9	23.3

	<u>n</u>	<u>Precision (+/- %)</u>
2004	12	17.5
	11	18.3
	10	19.3
	9	20.5

- n = the number of months data available
- Where $n < 9$ (i.e. where more than 3 months data is missing for a particular tube), the tube data has not been reported.
